# RAPPORT

## À

## M. LE PRÉSIDENT DE LA RÉPUBLIQUE.

MONSIEUR LE PRÉSIDENT,

La connaissance de la production agricole a de tout temps préoccupé vivement l'opinion publique. Aussi le Ministère de l'agriculture et du commerce est-il depuis longtemps sollicité de livrer à la publicité les renseignements qu'il reçoit annuellement des préfets sur les diverses récoltes. Les journaux spéciaux se sont faits, dans ces dernières années, l'écho de ces désirs, auxquels mon département a déjà donné en partie satisfaction. Ainsi les états des récoltes en céréales des années 1875 et 1876 ont été insérées au *Journal officiel*, et le Ministère a publié de la même manière quelques renseignements sur la production et l'importation du froment depuis 1820. Un volume contenant les prix du blé depuis le commencement du siècle a été également imprimé. L'accueil fait à ces publications a prouvé qu'elles répondaient à un besoin évident d'informations précises et rapides. J'ai, en conséquence, décidé que désormais les états des récoltes seraient publiés chaque année vers les premiers jours d'avril, c'est-à-dire environ huit mois après la moisson ; ce délai est matériellement nécessaire pour centraliser les chiffres transmis par les départements. Il m'a paru, en outre, qu'il convenait de compléter, en ce qui concerne le passé, les

informations sommaires contenues dans les insertions dont je viens de parler. La Direction de l'agriculture possède, sur les céréales, des renseignements très-complets et très-détaillés qui remontent à l'année 1815. J'ai pensé qu'il y aurait un sérieux intérêt à réunir ces documents, sous forme de tableaux, en un seul volume qui, reliant entre elles les différentes statistiques publiées jusqu'à ce jour, porterait à la connaissance du public une série non interrompue de renseignements de nature à permettre de suivre les diverses phases de la production pendant les soixante dernières années. Cette publication, qui rétablit pour ainsi dire le passé agricole de la France, présente en outre l'avantage de préserver de toute chance de destruction des documents qu'il serait matériellement impossible de reconstituer.

Cet important travail est aujourd'hui terminé et j'ai l'honneur de vous présenter le volume qui en contient les résultats.

Permettez-moi, Monsieur le Président, de vous exposer d'abord la division adoptée.

Ainsi que son titre l'indique, le volume contient les résumés des rapports adressés annuellement par les préfets depuis 1815 jusqu'à 1876 inclusivement, à l'exception des années 1819 et 1870; les documents concernant l'année 1819 n'ont pu être retrouvés; quant à l'année 1870, les événements ont empêché les administrations locales de recueillir aucun renseignement sur les récoltes.

La présente publication comprend d'abord une série de tableaux annuels qui font connaître, par département, pour chaque espèce de céréales et pour les pommes de terre, le nombre d'hectares cultivés, le rendement moyen à l'hectare et l'importance de la récolte totale. Jusqu'à l'année 1861, les départements sont groupés par régions. Au point de vue de la production agricole, les départements français ont été divisés en 10 régions de la manière suivante :

1re région (Nord-Ouest). — Finistère, Côtes-du-Nord, Morbihan, Ille-et-Vilaine, Manche, Calvados, Orne, Mayenne, Sarthe;

2e région (Nord). — Nord, Pas-de-Calais, Somme, Seine-Inférieure, Oise, Aisne, Eure, Eure-et-Loir, Seine-et-Oise, Seine, Seine-et Marne;

3e région (Nord-Est). — Ardennes, Marne, Aube, Haute-Marne, Meuse, Meurthe-et-Moselle, Vosges, Haut-Rhin (Belfort);

4e région (Ouest). — Loire-Inférieure, Maine-et-Loire, Indre et-Loire, Vendée, Charente-Inférieure, Deux-Sèvres, Charente, Vienne, Haute-Vienne;

5e région (Centre). — Loir-et-Cher, Loiret, Yonne, Indre, Cher, Nièvre, Creuse, Allier, Puy-de-Dôme;

6e région (Est). — Côte-d'Or, Haute-Saône,, Doubs, Jura, Saône-et-Loire, Loire, Rhône, Ain, Haute-Savoie, Savoie, Isère;

7e région (Sud-Ouest). — Gironde, Dordogne, Lot-et-Garonne, Landes, Gers, Basses-Pyrénées, Hautes-Pyrénées, Haute-Garonne, Ariége;

8e région (Sud). — Corrèze, Cantal, Lot, Aveyron, Lozère, Tarn-et-Garonne, Tarn, Hérault, Aude, Pyrénées-Orientales;

9e région (Sud-Est). — Haute-Loire, Ardèche, Drôme, Gard, Vaucluse, Basses-Alpes, Hautes-Alpes, Bouches-du-Rhône, Var, Alpes-Maritimes;

10e région. — Corse.

Cette division, purement géographique, est fort ancienne et a été quelquefois critiquée : on la représentait comme ne tenant pas suffisamment compte des différentes conditions de la culture dans les départements. Une classification irréprochable serait très-difficile à faire, attendu que la délimitation des départements eux-mêmes a été déterminée par des considérations complétement étrangères à l'agriculture. Néanmoins, s'il s'agissait aujourd'hui de procéder à une nouvelle divi-

sion, on s'efforcerait de réunir dans une même région des départements jouissant de climats semblables et possédant des terrains de constitution analogue. Quoi qu'il en soit, l'ancienne classification régionale, qui, malgré sa défectuosité, présentait quelques avantages, a été maintenue jusqu'en 1861; mais à cette époque, la législation dite de l'Échelle mobile ayant fait place à un nouveau régime, les départements ont cessé d'être divisés par zones. Aussi l'ordre alphabétique, généralement en usage dans les statistiques officielles, a-t-il été adopté à partir de cette année.

Cette première série est suivie d'un état récapitulatif contenant pour la France entière le résumé général de la production par année.

Le volume se termine par un ensemble de tableaux dans lesquels figurent des moyennes générales permettant de se rendre compte des progrès de la culture des diverses espèces. A cet effet, les soixante années ont été divisées en trois grandes périodes comprenant chacune vingt années; cet intervalle a paru nécessaire pour établir des moyennes offrant un degré suffisant d'exactitude.

Les huit premiers tableaux de cette série présentent successivement, pour chaque espèce de céréales, la moyenne annuelle du nombre d'hectares ensemencés pendant chacune des trois périodes adoptées, le rendement moyen par hectare, et enfin la production moyenne sur la totalité des terres ensemencées. Chaque tableau donne les renseignements ci-dessus indiqués, selon l'espèce de céréales qu'il concerne, pour les dix régions agricoles. Un neuvième et dernier tableau résume, pour la France entière, les chiffres groupés dans les huit premiers, de manière à former une récapitulation générale qui donne une idée nette et rapide du mouvement des cultures et qui permette d'embrasser d'un seul coup d'œil l'ensemble des résultats obtenus depuis soixante ans. J'ai cru devoir ajouter à ces résumés récapitulatifs un dernier état, extrait du volume publié en 1874, par la Direction de l'agriculture, sur les prix du froment depuis le commencement du siècle. On y trouve les prix moyens du froment par année et par région, avec l'indication des moyennes correspondant à chacune des périodes adoptées pour l'établissement des tableaux précédents.

Telle est, Monsieur le Président, la division des matières contenues dans la publication que j'ai l'honneur de vous soumettre. Les statisticiens, les économistes, ainsi que les nombreuses personnes qui s'intéressent aux progrès de l'agriculture, puiseront dans ce travail les éléments d'études qui ne sauraient trouver place dans un rapport. Je dois me borner ici à résumer rapidement les principaux faits qui ressortent de l'examen des tableaux.

J'adopterai, pour cette revue succincte, l'ordre suivi dans la publication : surfaces, rendements moyens, produits totaux.

La comparaison des surfaces cultivées pendant chaque période permettra de se rendre compte de l'extension donnée à chaque culture ou de la diminution qu'elle peut avoir subie.

L'examen comparatif des rendements moyens fera apprécier l'importance des améliorations apportées dans les procédés de culture, et constituera en quelque sorte la mesure des progrès réalisés.

Enfin la comparaison des récoltes totales fera ressortir pour chaque période les variations de la production.

Cet examen portera, tant pour l'ensemble des cultures que pour chaque espèce, sur la totalité du sol cultivé et sur chacune des régions agricoles. Bien que les départements cessent d'être groupés par régions à partir de 1862, il a semblé utile de maintenir cette division dans les résumés

comparatifs. Le rapprochement par départements aurait exigé un travail dont les proportions eussent excédé celles d'un rapport d'ensemble; on trouve d'ailleurs, dans les tableaux de la première série, les éléments de cette comparaison.

## SURFACES CULTIVÉES.

Mouvement des cultures sur la totalité du territoire.

Pendant la première période (de 1815 à 1835) la superficie cultivée annuellement en céréales peut être évaluée en moyenne à 13,633,420 hectares, soit les 25. 70 centièmes de la superficie totale du sol français. Dans la seconde période (1836 à 1855) cette surface s'est élevée au chiffre moyen annuel de 14,730,674 hectares, soit les 27. 70 centièmes de la superficie de la France. Enfin de 1856 à 1876, le nombre moyen annuel d'hectares ensemencés en céréales a atteint le chiffre de 15,064,723. Il serait difficile d'établir exactement le rapport de ce dernier chiffre à la superficie totale du sol, attendu que, dans le cours de cette période, le territoire a été une première fois augmenté en 1860, par suite de l'annexion de la Savoie et du comté de Nice, puis diminué en 1871, en vertu du traité de Francfort, et ramené, à peu de chose près, à la contenance antérieure à 1860. Toutefois, en 1876, la surface occupée par la culture des céréales représentait environ les 28. 45 centièmes du territoire actuel.

En résumé, pendant la seconde période, les surfaces ensemencées annuellement ont dépassé de 1,097,254 hectares le chiffre atteint pendant la première période. Dans les vingt dernières années on compte annuellement 334,049 hectares de plus que pendant la seconde période et 1,431,303 de plus que pendant la première.

Il convient de remarquer que cette augmentation a marché de pair avec un développement constant dans les autres cultures; une grande surface de terres incultes a donc été mise en valeur depuis cinquante ans environ.

L'augmentation signalée dans les surfaces consacrées à la culture des céréales porte presque exclusivement sur le froment et sur l'avoine. Le froment, dont les ensemencements couvraient, en 1815, 4 millions et demi d'hectares, en occupait 5 millions en 1830 et 5 millions et demi en 1835. Ce chiffre s'est élevé pendant la seconde période à 5,816,891 hectares, et pendant la troisième période à 6,816,411 hectares.

L'augmentation des surfaces cultivées en avoine a été également continue, quoique moins considérable que pour le froment. Le chiffre de la dernière période excède de 249,000 hectares environ le chiffre de la période intermédiaire et de 600,000 hectares celui de la première période.

La culture du méteil occupe actuellement une surface représentant la moitié de celle qui lui était consacrée pendant la première période. Le seigle a perdu 128,000 hectares pendant la période intermédiaire et 583,000 hectares pendant les vingt dernières années, soit une diminution totale de 711,000 hectares représentant environ le quart de la surface cultivée annuellement de 1815 à 1835.

L'orge a perdu 68,000 hectares pendant la seconde période et 70,000 hectares pendant la dernière, soit en tout 138,000 hectares ou la neuvième partie environ de la surface cultivée à l'origine.

Le sarrasin et le maïs sont restés à peu près stationnaires; ces deux cultures offrent peu d'importance, puisqu'elles occupent à peine, à elles deux, la dixième partie des terres consacrées aux céréales. On verra plus loin qu'elles sont d'ailleurs en quelque sorte localisées: le sarrasin est prin-

cipalement cultivé dans les départements qui formaient l'ancienne province de Bretagne et dans quelques départements du centre. Quant au maïs, sa culture exige des conditions spéciales de sol et de climat qui la restreignent aux régions du Midi et de l'Est.

Le mouvement de la culture des céréales se concentre donc sur les cinq espèces suivantes qu'il est permis de qualifier du nom de principales espèces : le froment, le méteil, le seigle, l'orge et l'avoine. Si le méteil, le seigle et l'orge ont perdu en tout 1,155,000 hectares sur les surfaces cultivées à l'origine, le froment et l'avoine ont gagné 2,461,000 hectares, le sarrasin et le maïs ont, de leur côté, gagné 145,000 hectares environ. On voit, ainsi que j'ai déjà eu l'honneur de l'exposer plus haut, que l'ensemble des céréales occupe aujourd'hui annuellement une surface supérieure de 1,500,000 hectares environ à celle qui leur était consacrée de 1815 à 1835.

La grande extension donnée à la culture du froment tient à des causes trop généralement connues pour qu'il soit nécessaire d'y insister. Rappelons seulement que, par suite de l'augmentation du bien-être général, la consommation du pain de froment s'est accrue d'une façon notable au détriment de celle du pain de seigle et du pain de sarrasin, ce qui explique à la fois la diminution de la première de ces cultures et l'état stationnaire de la seconde.

La diminution subie par la culture de l'orge n'est qu'apparente : elle représente à peu près les surfaces que cette céréale occupait dans les départements enlevés à la France à la suite des désastres de 1870-1871.

Les surfaces cultivées en pommes de terre ont peu varié depuis 1830. Les chiffres recueillis pendant la première période n'ont pas paru présenter un caractère de régularité et d'exactitude suffisant pour qu'on pût en tirer des moyennes. Nous avons cru en conséquence devoir nous borner à comparer les deux dernières périodes. Or on constate pendant les vingt dernières années une légère augmentation (153,000 hectares environ) qui se répartit à peu près également entre toutes les régions.

Mouvement des cultures dans les diverses régions

J'aborde maintenant, en suivant le même ordre que pour la France entière, l'examen du mouvement des cultures dans les diverses régions.

*Ensemble des céréales.* Le tableau suivant contient le classement des diverses régions au point de vue de l'étendue des superficies cultivées annuellement en céréales pendant chacune des trois périodes. Les surfaces sont exprimées en milliers d'hectares.

| SURFACES CULTIVÉES ANNUELLEMENT EN CÉRÉALES | | | | | |
|---|---|---|---|---|---|
| DE 1815 À 1835. | | DE 1836 À 1855. | | DE 1856 À 1876. | |
| RÉGIONS. | Surfaces cultivées. | RÉGIONS. | Surfaces cultivées. | RÉGIONS. | Surfaces cultivées. |
| 2e — (Nord) | 2,289 | 2e — (Nord) | 2,392 | 2e — (Nord) | 2,493 |
| 1re — (Nord-Ouest) | 1,888 | 1re — (Nord-Ouest) | 1,975 | 1re — (Nord-Ouest) | 2,053 |
| 3e — (Nord-Est) | 1,808 | 3e — (Nord-Est) | 1,919 | 4e — (Ouest) | 1,838 |
| 5e — (Centre) | 1,626 | 4e — (Ouest) | 1,806 | 5e — (Centre) | 1,777 |
| 4e — (Ouest) | 1,440 | 5e — (Centre) | 1,745 | 3e — (Nord-Est) | 1,772 |
| 7e — (Sud-Ouest) | 1,354 | 7e — (Sud-Ouest) | 1,458 | 6e — (Est) | 1,613 |
| 6e — (Est) | 1,280 | 6e — (Est) | 1,449 | 7e — (Sud-Ouest) | 1,444 |
| 8e — (Sud) | 1,172 | 8e — (Sud) | 1,213 | 8e — (Sud) | 1,202 |
| 9e — (Sud-Est) | 722 | 9e — (Sud-Est) | 743 | 9e — (Sud-Est) | 767 |
| 10e — (Corse) | 25 | 10e — (Corse) | 35 | 10e — (Corse) | 55 |

Les départements du Nord, de l'Ouest et du Centre ont conservé le rang qu'ils occupaient dès l'origine; les régions de l'Est et du Midi, malgré l'extension donnée aux autres cultures, principalement à celle de la vigne dans le Midi, ont vu s'accroître les surfaces cultivées en céréales. L'accroissement a d'ailleurs été général, sauf pour la région du Nord-Est, où l'on constate une diminution finale de 36,000 hectares. Ce fait provient de la perte de territoire subie en 1871 par cette région dont faisaient partie les départements fertiles d'Alsace et de Lorraine enlevés aujourd'hui à la France. Cette diminution n'est donc qu'apparente et n'altère pas le rapport entre l'étendue cultivée en céréales dans ladite région et la superficie totale de son territoire.

Le tableau suivant indique les augmentations moyennes annuelles réalisées pendant chaque période. Les régions y sont classées par ordre décroissant; les chiffres portés en regard de chacune d'elles indiquent en milliers d'hectares la différence entre les moyennes annuelles des diverses périodes.

| 10e — (Corse)......... | 10 | // | 3e — (Nord Est)...... | // | 147 | 3e — (Nord-Est)...... | // | 36 |

Il est facile, au moyen de ce tableau, de se rendre compte du développement de la culture des céréales dans les différentes régions. Là où cette culture était déjà très-répandue à l'origine, l'augmentation n'a pas été relativement considérable; telles sont les 1re et 2e régions. Dans d'autres, telles que la 4e (Ouest) et la 6e (Est), les ensemencements ont, au contraire, augmenté dans une grande proportion. Quant aux régions du Midi, à part la 7e région (Sud-Ouest) qui prend place parmi les régions les mieux cultivées, il faut reconnaître que les progrès n'y ont pas été très-sensibles. Un fait digne de remarque, c'est que, dans toutes les régions, l'augmentation des surfaces a été bien plus importante pendant la 2e période que pendant la 3e. Dans les régions du Sud et du Sud-Ouest, on constate une légère diminution pendant les vingt dernières années. La diminution de 147,000 hectares accusée par la 3e région, pendant la 2e période, correspond, ainsi que je l'ai déjà dit, à la perte de territoire de 1871.

*Froment.* — Cette culture est de beaucoup la plus importante, puisqu'elle absorbe à elle seule les 45 centièmes de la surface totale consacrée aux céréales. Il m'a paru, en conséquence, nécessaire d'établir, en ce qui la concerne, deux tableaux semblables à ceux qui précèdent.

Le tableau ci-après indique, pour chaque période, le classement des régions, au point de vue de l'étendue des surfaces cultivées annuellement en froment. (Les chiffres représentent des milliers d'hectares.)

SURFACES CULTIVÉES ANNUELLEMENT EN FROMENT.

| DE 1815 À 1835. | | DE 1836 À 1855. | | DE 1856 À 1876. | |
|---|---|---|---|---|---|
| RÉGIONS. | SURFACES cultivées annuellement en froment. (Milliers d'hectares.) | RÉGIONS. | SURFACES cultivées annuellemet en froment. (Milliers d'hectares.) | RÉGIONS. | SURFACES cultivées annuellement en froment. (Milliers d'hectares.) |
| 2e — (Nord) | 895 | 2e — (Nord) | 979 | 2e — (Nord) | 1,150 |
| 7e — (Sud-Ouest) | 712 | 4e — (Ouest) | 828 | 4e — (Ouest) | 1,010 |
| 3e — (Nord-Est) | 632 | 7e — (Sud-Ouest) | 763 | 7e — (Sud-Ouest) | 778 |
| 4e — (Ouest) | 585 | 3e — (Nord-Est) | 742 | 6e — (Est) | 761 |
| 1re — (Nord-Ouest) | 499 | 1re — (Nord-Ouest) | 615 | 3e — (Nord-Est) | 736 |
| 8e — (Sud) | 465 | 6e — (Est) | 509 | 1re — (Nord-Ouest) | 724 |
| 5e — (Centre) | 394 | 5e — (Centre) | 478 | 5e — (Centre) | 631 |
| 6e — (Est) | 392 | 8e — (Sud) | 478 | 9e — (Sud-Est) | 497 |
| 9e — (Sud-Est) | 348 | 9e — (Sud-Est) | 398 | 8e — (Sud) | 488 |
| 10e — (Corse) | 14 | 10e — (Corse) | 22 | 10e — (Corse) | 36 |

Ici, comme pour l'ensemble des céréales, les régions du Nord et de l'Ouest occupent le premier rang; viennent ensuite le Sud-Ouest, l'Est et le Nord-Est, en tenant compte de la diminution de territoire de 1871. Quant au Nord-Ouest, s'il n'occupe pas dans ce tableau le même rang que dans celui qui a été dressé pour l'ensemble des céréales, cela tient à ce que la culture du sarrasin y absorbe encore une superficie assez importante. L'examen du tableau suivant fera d'ailleurs mieux connaître pour chaque région l'importance de l'extension donnée à la culture du froment pendant les trois périodes.

ACCROISSEMENT MOYEN ANNUEL DES SURFACES CULTIVÉES EN FROMENT. (MILLIERS D'HECTARES.)

| RÉGIONS. | De la 1re à la 2e période. | RÉGIONS. | De la 2e à la 3e période. | RÉGIONS. | De la 1re à la 3e période. |
|---|---|---|---|---|---|
| 4e — (Ouest) | 243 | 6e — (Est) | 252 | 4e — (Ouest) | 425 |
| 6e — (Est) | 117 | 4e — (Ouest) | 182 | 6e — (Est) | 369 |
| 1re — (Nord-Ouest) | 116 | 2e — (Nord) | 171 | 2e — (Nord) | 255 |
| 3e — (Nord-Est) | 110 | 5e — (Centre) | 153 | 1re — (Nord-Ouest) | 237 |
| 5e — (Centre) | 84 | 1re — (Nord-Ouest) | 109 | 5e — (Centre) | 225 |
| 2e — (Nord) | 84 | 9e — (Sud-Est) | 99 | 9e — (Sud-Est) | 149 |
| 7e — (Sud-Ouest) | 51 | 7e — (Sud-Ouest) | 15 | 3e — (Nord-Est) | 104 |
| 9e — (Sud-Est) | 50 | 8e — (Sud) | 10 | 7e — (Sud-Ouest) | 66 |
| 8e — (Sud) | 13 | 10e — (Corse) | 14 | 8e — (Sud) | 23 |
| 10e — (Corse) | 8 | 3e — (Nord-Est) | 6 | 10e — (Corse) | 22 |

Contrairement à ce que nous avons vu pour l'ensemble des céréales, l'extension donnée à la culture du froment a été beaucoup plus considérable pendant la troisième période que pendant la deuxième. C'est à partir de 1850 que l'on remarque, dans les chiffres recueillis annuellement, une augmentation notable, qui a été constante jusqu'aux dernières années. C'est, en effet, à dater

de 1850 que le bien-être général a augmenté, par suite du développement de l'industrie et du commerce; les progrès de la science agricole, dont l'examen des rendements nous donnera la mesure, ont contribué aussi à répandre la culture du froment, reconnue plus productive que celle des autres céréales. C'est dans les régions de l'Ouest et de l'Est que le froment a fait les progrès les plus rapides et les plus constants. Vient ensuite le Nord-Ouest, où la surface cultivée annuellement en froment est aujourd'hui supérieure de 2/5es à ce qu'elle était pendant la première période. Quant au Nord, il conserve le premier rang; mais il importe de remarquer que le froment y absorbait, dès les premières années qui nous occupent, une surface considérable; les départements qui composent cette région possèdent un sol fertile très-propice à la production des céréales; on y a en outre adopté rapidement les améliorations réalisées dans les procédés de culture, il ne faut donc pas s'étonner si l'augmentation absolue dans les ensemencements en froment n'est pas aussi accentuée dans cette région que dans celles où la culture du froment ne s'est développée que parallèlement aux besoins de la consommation. La même observation peut s'appliquer aux régions de l'Ouest et du Sud-Ouest, qui, comme celles du Nord et de l'Ouest, produisaient autrefois des quantités de froment excédant de beaucoup leurs besoins et comblaient l'insuffisance de la production dans les autres régions. Cette situation a changé : sous l'influence du développement de la civilisation, les besoins ont augmenté; le capital s'est accru, les procédés de culture se sont améliorés dans presque toutes les régions, et aujourd'hui, sauf dans quelques départements du Midi, le déficit de la production s'atténue de plus en plus dans les régions qui recouraient autrefois à des contrées plus favorisées pour compléter leur alimentation.

*Méteil.* — Les trois régions où cette espèce était le plus cultivée autrefois étaient celles du Nord, de l'Ouest et du Centre. Dans la 2e région, la surface ensemencée en méteil atteignait la huitième partie de la superficie totale absorbée par les céréales. Ces surfaces sont aujourd'hui diminuées de moitié: cette diminution porte presque en entier sur la dernière période et coïncide avec la grande augmentation de la culture du froment. Dans le Nord-Ouest et le Nord-Est la diminution a été moindre; dans les autres régions elle est presque aussi forte que dans les trois régions citées plus haut.

*Seigle.* — La diminution constatée dans la culture du seigle a été peu considérable pendant la 2e période. Les régions de l'Ouest, du Centre, de l'Est et du Sud présentent même une légère augmentation. Mais pendant les vingt dernières années on constate une diminution générale, sauf dans la 10e région (Corse), où l'on trouve une augmentation d'un millier d'hectares.

*Orge.* — La 1re région (Nord-Ouest) présente une augmentation de 55,000 hectares sur le chiffre moyen annuel des ensemencements; on constate également une augmentation de 23,000 hectares dans la 2e région (Nord). Ce fait provient de la faveur croissante que certaines variétés d'orge rencontrent en Angleterre; on remarque, en effet, que l'exportation de l'orge cultivée dans ces régions s'est accrue. Partout ailleurs la culture de l'orge a diminué. La diminution la plus forte (91,000 hectares) porte sur la 3e région (Nord-Est) et doit être attribuée à la perte de territoire subie par cette région.

*Sarrasin.* — La culture du sarrasin est restée à peu près stationnaire. La dernière période présente cependant une légère augmentation ainsi répartie: région de l'Ouest, 39,000 hectares;

région du Centre, 17,000 hectares; région du Sud, 11,000 hectares. L'usage du pain de sarrasin a néanmoins diminué; l'emploi de ce grain à la nourriture de la volaille, dont l'élevage a pris en France de grandes proportions, peut seul expliquer cette augmentation d'ailleurs assez légère.

*Maïs.* — Le maïs est presque exclusivement cultivé dans la 7e région (Sud-Ouest) et dans la 8e (Sud). Dans la 7e région on constate, de la 1re à la 2e période, une augmentation de 65,000 hectares dans le chiffre annuel des ensemencements; de la 2e à la 3e période on remarque une nouvelle augmentation de 22,000 hectares. Dans la 8e région, le nombre d'hectares ensemencés annuellement ne varie pas sensiblement d'une période à l'autre. Dans la 1re région (Nord-Ouest) la culture du maïs et du millet a diminué de moitié. Dans les autres régions cette culture n'a subi aucune variation.

*Avoine.* — La culture de l'avoine a pris un développement assez important, puisque le nombre d'hectares ensemencés annuellement, qui, pendant la 1re période, ne s'élevait qu'à 2,630,000 hectares, a atteint, pendant la 2e période, le chiffre de 2,982,000, et pendant la 3e celui de 3,231,000. Dans toutes les régions l'augmentation a été constante. Le tableau suivant indique le classement des régions pendant chaque période au point de vue de l'étendue des surfaces cultivées.

SURFACES CULTIVÉES ANNUELLEMENT EN AVOINE.
(MILLIERS D'HECTARES.)

| DE 1815 À 1835. | | DE 1836 À 1855. | | DE 1856 À 1876. | |
|---|---|---|---|---|---|
| RÉGIONS. | Surfaces. | Régions. | Surfaces. | RÉGIONS. | Surfaces. |
| 2e — (Nord) | 769 | 2e — (Nord) | 830 | 2e — (Nord) | 866 |
| 3e — (Nord-Est) | 575 | 3e — (Nord-Est) | 640 | 3e — (Nord-Est) | 630 |
| 1re — (Nord-Ouest) | 352 | 5e — (Centre) | 412 | 5e — (Centre) | 477 |
| 5e — (Centre) | 345 | 1re — (Nord-Ouest) | 365 | 1re — (Nord-Ouest) | 389 |
| 6e — (Est) | 217 | 6e — (Est) | 259 | 6e — (Est) | 302 |
| 4e — (Ouest) | 158 | 4e — (Ouest) | 229 | 4e — (Ouest) | 294 |
| 8e — (Sud) | 93 | 8e — (Sud) | 113 | 8e — (Sud) | 116 |
| 9e — (Sud-Est) | 68 | 9e — (Sud-Est) | 74 | 9e — (Sud-Est) | 85 |
| 7e — (Sud-Ouest) | 50 | 7e — (Sud-Ouest) | 55 | 7e — (Sud-Ouest) | 69 |

La région du Nord tient ici, comme pour le froment, le premier rang pendant les trois périodes: la région du Nord-Est, malgré la diminution de 10,000 hectares résultant de la perte de territoire, conserve également le second rang; la 5e région (Centre) prend, dès la seconde période, la place qu'occupait la 1re région (Nord-Ouest); les autres régions conservent leur classement pendant les trois périodes.

*Pommes de terres.* — Les renseignements recueillis pendant la 1re période, en ce qui concerne la culture des pommes de terre, n'ont pas paru présenter un caractère d'exactitude suffisant pour permettre d'établir des moyennes. Je me bornerai à comparer les surfaces cultivées

pendant les deux dernières périodes. Le tableau suivant indique le classement des régions à ce point de vue.

| SURFACES CULTIVÉES ANNUELLEMENT EN POMMES DE TERRE. (MILLIERS D'HECTARES.) | | | |
|---|---|---|---|
| DE 1836 À 1855. | | DE 1856 À 1876. | |
| RÉGIONS. | Surfaces. | RÉGIONS. | Surfaces. |
| 3ᵉ — (Nord-Est | 166 | 3ᵉ — (Nord-Est) | 173 |
| 6ᵉ — (Est) | 138 | 6ᵉ — (Est) | 168 |
| 4ᵉ — (Ouest) | 105 | 4ᵉ — (Ouest) | 124 |
| 7ᵉ — (Sud-Ouest) | 102 | 2ᵉ — (Nord) | 115 |
| 5ᵉ — (Centre) | 95 | 5ᵉ — (Centre) | 107 |
| 1ʳᵉ — (Nord-Ouest) | 90 | 7ᵉ — (Sud-Ouest) | 103 |
| 8ᵉ — (Sud) | 81 | 9ᵉ — (Sud-Est) | 102 |
| 9ᵉ — (Sud-Est) | 80 | 1ʳᵉ — (Nord-Ouest) | 100 |
| 2ᵉ — (Nord) | 79 | 8ᵉ — (Sud) | 98 |

L'augmentation dans les surfaces cultivées pendant la 3ᵉ période se répartit comme il suit entre les différentes régions :

| | | |
|---|---|---|
| 2ᵉ région | Nord | 36,000 hectares. |
| 6ᵉ —— | Est | 30,000 |
| 9ᵉ —— | Sud-Est | 22,000 |
| 4ᵉ —— | Ouest | 19,000 |
| 8ᵉ —— | Sud | 17,000 |
| 5ᵉ —— | Centre | 12,000 |
| 1ʳᵉ —— | Nord-Ouest | 10,000 |
| 3ᵉ —— | Nord-Est | 8,000 |
| 7ᵉ —— | Sud-Ouest | 1,000 |

C'est donc dans les régions du Nord et de l'Est que l'augmentation a été relativement plus forte.

Ici se termine l'examen du mouvement des diverses cultures. Dans l'exposé qui va suivre, je passerai en revue les rendements moyens, c'est-à-dire le produit moyen annuel d'un hectare pendant chacune des trois grandes périodes adoptées. Cet examen portera successivement sur chaque espèce.

## RENDEMENTS MOYENS.

L'augmentation constatée dans les surfaces consacrées à la culture des céréales porte, nous l'avons vu, presque exclusivement sur le froment et l'avoine. Les rendements moyens, c'est-à-dire le produit moyen annuel d'un hectare, présentent, au contraire, une augmentation constante s'appliquant à toutes les espèces, qui ont dû en effet profiter à peu près également des progrès de l'agriculture. Mais ces progrès sont variables selon les régions : il est donc indispensable

d'examiner successivement, pour chaque espèce, les rendements des diverses régions, après avoir comparé pour la France entière le produit moyen de l'hectare pendant les périodes adoptées.

De 1815 à 1835, l'hectare cultivé en froment produisait annuellement en moyenne 11 hectol. 57 lit.; de 1836 à 1855 cette production s'est élevée à 13 hectol. 30 lit. Pendant les vingt dernières années elle a atteint 14 hectol. 58 lit. Ces rendements paraîtront sans doute faibles, mais il importe de considérer : 1° qu'ils constituent une moyenne calculée sur vingt années; 2° qu'ils représentent le rendement moyen de la France entière : il faut donc tenir compte tant des mauvaises années que des faibles rendements de certaines contrées. Les années sont classées dans le tableau suivant par ordre d'importance au point de vue du rendement moyen. Froment.

| 1827...... | 11.58 | | | | | | | | | | |

Le plus fort rendement depuis 1815 a été celui de 1874 (19 hectol. 36 lit.); aussi cette année est-elle citée comme la meilleure du siècle. L'année 1872 vient en seconde ligne avec un rendement de 17 hectol. 41 lit. Se placent ensuite les années 1863, 1857, 1858, 1868, dont les rendements varient de 16 hectol. 88 lit. à 16 hectol. 53 lit. Toutes ces années appartiennent à la dernière période. L'année 1847 (2e période) a produit 16 hectol. 32 lit. Enfin l'année 1832 (15 hectol. 52 lit.) est la seule de la 1re période dont le rendement dépasse 15 hectolitres.

En résumé, l'augmentation des rendements a été constante, mais elle a été plus notable pendant la 2e période que pendant la 3e. L'effort a dû être en effet plus considérable au début, puisqu'il y avait plus à conquérir. Nous allons voir en parcourant les diverses régions sur quels points le progrès a été le plus rapide ou le plus complet.

Le tableau suivant donne le classement des régions au point de vue de l'importance des rendements moyens pendant chacune des périodes.

PRODUIT MOYEN ANNUEL D'UN HECTARE CULTIVÉ EN FROMENT.

| | | 9e — (S.-E.).. | 9.46 | | | 8e — (Sud)... | 10.09 | | | 8e — (Sud).. | 11.46 |
| | | 7e — (S.-O.).. | 8.11 | | | 7e — (S.-O.).. | 9.83 | | | 9e — (S.-E.). | 11.25 |

Les trois premières régions présentent constamment des rendements supérieurs à la moyenne générale. Les départements qui composent ces régions sont en effet les plus fertiles; la culture du froment y est pratiquée depuis longtemps: les agriculteurs de ces contrées ont, en outre, été les premiers à adopter les perfectionnements apportés dans les procédés de culture. Les 5e et 6e régions ont toujours approché de la moyenne générale sans l'atteindre, sauf dans les années les plus prospères dont on trouve la production détaillée dans le courant du volume. On peut donc les considérer comme des régions moyennes au point de vue du rendement. La 4e région se maintient un peu au-dessous des deux régions que je viens de citer. Quant aux 7e, 8e et 9e régions, leurs rendements sont restés toujours bien au-dessous du chiffre moyen.

Je n'ai pas cru devoir faire figurer la 10e région (Corse) dans cet examen: les chiffres fournis par ce département ne paraissent pas suffisamment exacts. La culture des céréales y occupe d'ailleurs, relativement aux surfaces cultivées dans toute la France, une place trop peu importante pour pouvoir modifier les moyennes.

Nous avons vu que l'hectare cultivé en froment produit aujourd'hui en moyenne pour toute la France 14 hectol. 58, soit 3 hectol. 01 de plus que pend nt la première période. Cette augmentation a été dépassée dans 5 régions; dans 4 autres elle n'a pas été atteinte. A ce point de vue, les régions se classent comme il suit:

| | | hectol. lit. |
|---|---|---|
| 5e région | Centre | 4,08 |
| 7e ——— | Sud-Ouest | 3,87 |
| 4e ——— | Ouest | 3,41 |
| 2e ——— | Nord | 3,32 |
| 3e ——— | Nord-Est | 3,29 |
| 6e ——— | Est | 2,55 |
| 8e ——— | Sud | 1,82 |
| 9e ——— | Sud-Est | 1,79 |
| 1re ——— | Nord-Ouest | 1,67 |

Ce classement permet d'apprécier l'intensité des progrès réalisés dans chacune des régions. Pour déterminer le degré de rapidité de ces progrès, il faut comparer l'augmentation réalisée entre chaque période avec l'augmentation définitive. Le tableau suivant contient les résultats de cette comparaison.

AUGMENTATION DU RENDEMENT MOYEN (FROMENT).

| RÉGIONS. | DE LA 1re À LA 2e PÉRIODE. | DE LA 2e À LA 3e PÉRIODE. | DE LA 1re À LA 3e PÉRIODE. |

| | | (1) 0.30 de diminution. | |

Dans la plupart des régions, l'augmentation est plus forte de la 1re à la 2e période que de la 2e à la 3e, ce que nous avons eu déjà occasion de constater en ce qui concerne le rendement moyen général de la France. Les 5e, 7e et 8e régions font seules exception à cette loi générale. On remarque, en outre, que la 1re région est restée sensiblement stationnaire pendant les vingt dernières années. Néanmoins cette région est encore classée parmi celles qui donnent un rendement supérieur à la moyenne. Quant aux 4e, 5e et 6e régions, on peut les considérer comme des régions moyennes au point de vue du rendement. Les trois régions du Midi (7e, 8e et 9e) restent seules bien au-dessous de la moyenne. De grandes améliorations ont été cependant réalisées dans ces contrées. La 7e région notamment a vu son rendement s'élever de 2 hectol. 15 lit. pendant la dernière période.

En résumé, il ressort de cet examen sommaire que la culture du froment a fait de grands progrès en France. Notre rendement moyen général n'atteint pas, il est vrai, celui de nos voisins d'outre-Manche ; mais, s'il faut en croire les renseignements qui nous sont transmis à ce sujet, le froment n'est cultivé, en Angleterre, que dans les meilleurs terrains; l'élevage des animaux est très-développé dans ce pays et les engrais y sont abondants; en outre, l'outillage agricole y est très-perfectionné. En France, au contraire, le froment est cultivé dans tous les départements sans exception : les rendements inférieurs de certains départements où la culture se fait dans des conditions défavorables, ainsi que ceux des contrées où d'autres cultures plus appropriées au climat et à la nature du sol absorbent la majeure partie des terres, contre-balancent ceux des contrées plus fertiles, et le rendement moyen général se trouve par ce fait notablement diminué. Mais dans quelques régions, notamment celles du Nord et du Nord-Est, nous trouvons des produits à l'hectare aussi considérables que ceux de l'Angleterre. Certains départements de ces deux régions n'ont rien

à envier, sous ce rapport, à nos voisins. Quant aux autres contrées, elles ont réalisé des améliorations sérieuses, et le Gouvernement continuera sans aucun doute à encourager, par tous les moyens dont il dispose, les efforts qu'elles font pour obtenir de jour en jour de meilleurs résultats.

Ces observations générales peuvent s'appliquer à toutes les céréales. Il suffira donc de passer rapidement en revue, pour chacune des espèces, les résultats obtenus, sans entrer dans les détails qu'exigeait l'importance exceptionnelle de la culture du froment.

Méteil.

La culture du méteil, bien qu'ayant beaucoup diminué, puisque les surfaces cultivées sont réduites aujourd'hui aux deux tiers de ce qu'elles étaient il y a trente ans, a profité des progrès de l'agriculture. Le rendement moyen général de la France, qui était de 12 hectol. 29 lit. pendant la 1re période, s'est élevé à 14 hectol. 08 lit. pendant les vingt années suivantes; il atteint aujourd'hui 15 hectol. 57 lit.

On retrouve, au point de vue de l'importance des rendements dans les diverses régions, à peu près le même classement que pour le froment. Il en est de même en ce qui concerne les augmentations successives constatées dans les rendements moyens annuels. Cette analogie est d'ailleurs facile à comprendre.

Seigle.

Le seigle produisait à l'hectare, pendant la 1re période, 10 hectol. 50 lit. Ce rendement s'est élevé à 11 hectol. 70 lit. pendant la période intermédiaire; il atteint aujourd'hui 13 hectol. 35 lit. L'augmentation totale est donc de 2 hectol. 85 lit., se rapprochant de celle qui a été constatée dans le rendement moyen du froment. Ces résultats sont dépassés dans les quatre premières régions, les cinq autres restent au-dessous de la moyenne. Le tableau suivant contient le classement des régions pendant chaque période au point de vue de l'importance du rendement:

| | | 3e — (N.-Est). . | 9. 57 | 3e — (N.-Est). . | 12. 00 | 8e — (Sud) . . . | 9. 92 | 4e — (Ouest). . | 13. 49 | 8e — (Sud) . . | 11. 64 |
| | | 9e — (S.-Est). . | 9. 39 | | | 7e — (S.-O.) . . | 8. 93 | | | 7e — (S.-O.). | 10. 90 |
| | | 7e — (S.-O.) . . | 8. 77 | | | | | | | | |

On retrouve dans ce classement les mêmes caractères distinctifs que nous avons eu occasion de signaler en ce qui concerne la culture du froment. La seule remarque à faire consiste dans le rang plus élevé qu'occupe la 4e région (Ouest).

Le rendement moyen de l'orge pour la France entière s'est élevé successivement de 13 hectol.

31 lit. à 15 hectol. 59 lit. et à 18 hectol. 6 lit. Le tableau suivant indique la répartition de ces augmentations entre les diverses régions :

Le classement n'est plus ici le même que pour le seigle et se rapproche de celui du froment : les deux premières régions conservent le premier rang pendant les trois périodes ; la $3^{e}$ région parvient, pendant les vingt dernières années, à dépasser la moyenne générale, qu'elle n'avait pu atteindre jusqu'alors. Ces trois régions sont celles qui donnent actuellement les rendements les plus élevés ; elles ont aussi réalisé les augmentations de surface les plus considérables.

Le rendement moyen général du sarrasin de 1815 à 1835 ne dépassait pas 10 hectol. 56 lit. Sarrasin.
Ce chiffre s'est élevé pendant la $2^{e}$ période à 14 hectol. 23 lit., soit 3 hectol. 67 lit. d'augmentation. Mais pendant les vingt dernières années le rendement ne s'est accru que de 0 hectol. 17 lit. : ainsi que nous l'avons vu, cette culture peut être considérée comme stationnaire.

La $1^{re}$ région absorbe d'ailleurs à elle seule les deux tiers de la surface cultivée dans toute la France. Le rendement de cette région a été toujours supérieur à la moyenne générale et a suivi une progression constante. Dans la $4^{e}$ région, qui vient ensuite au point de vue de l'étendue de la culture, les rendements sont moins élevés. Dans la $6^{e}$ au contraire, le rendement actuel est plus élevé que dans la $1^{re}$ région.

On remarque, dans le rendement moyen général du maïs en France, une progression analogue Maïs et millet.
à celle du sarrasin. De 10 hectol. 82 lit., il s'est élevé à 14 pendant la $2^{e}$ période : mais l'augmentation constatée pendant les vingt dernières années n'est que de 0 hectol. 83 lit. Dans les deux seules régions $7^{e}$ (Sud-Ouest) et $8^{e}$ (Sud), où cette culture a réellement quelque importance, les rendements sont supérieurs à ceux de la $1^{re}$ période ; mais l'augmentation réalisée pendant les vingt dernières années n'est pas considérable.

Cette culture, on l'a vu par l'examen des surfaces, est la plus importante après celle du froment. Avoine.
L'hectare cultivé en avoine, qui produisait de 1815 à 1835 16 hectolitres en moyenne, a produit 19 hectol. 81 lit. pendant la $2^{e}$ période. Le rendement moyen général est aujourd'hui

de 22 hectol. 33 lit. L'augmentation a été constante, mais un peu plus forte de la $1^{re}$ à la $2^{e}$ période, que de la $2^{e}$ à la $3^{e}$ ; ce que nous avons constaté en ce qui concerne le froment.

Le tableau suivant fait connaître, pour chacune des périodes, le classement des régions au point de vue de l'importance des rendements.

| | | $7^{e}$ — (S.-O.).. | 13. 55 | | | $3^{e}$ — N-E.)... | 17. 17 | | | $5^{e}$ — (Centre). | 18. 04 |
| | | $4^{e}$ — (Ouest).. | 13. 23 | | | $7^{e}$ — (S.-O.).. | 15. 85 | | | $7^{e}$ — (S.-O.). | 17. 35 |
| | | $3^{e}$ — (N.-E.).. | 12. 94 | | | $4^{e}$ — (Ouest).. | 15. 69 | | | $9^{e}$ — (S-E.).. | 16. 87 |
| | | $9^{e}$ — (Sud-Est). | 12. 86 | | | $8^{e}$ — (Sud)... | 15. 64 | | | $4^{e}$ — (Ouest) | 16. 45 |
| | | $5^{e}$ — (Centre). | 11. 79 | | | $5^{e}$ — (Centre). | 14. 26 | | | $8^{e}$ — (Sud).. | 15. 82 |

La $1^{re}$ et la $2^{e}$ région occupent le premier rang dans ce classement : elles sont les seules dont les rendements excèdent la moyenne générale; mais il importe de remarquer à cet égard que la surface cultivée en avoine dans la $2^{e}$ région représente plus du quart de la superficie totale consacrée à cette culture dans toute la France, et le double des surfaces ensemencées dans plusieurs régions. De plus, le rendement moyen de cette région est très-élevé. Le chiffre de ses produits influe donc notablement sur la moyenne, et l'on doit considérer comme de véritables régions moyennes celles qui présentent des rendements approchant de ceux de la $1^{re}$ région. La $6^{e}$ région notamment, dont le rendement s'est élevé de 14 hectol. 35 lit. à 17 hectol. 57 lit. et en dernier lieu à 20 hectol. 68 lit. peut être rangée dans cette catégorie. Il en est de même de la $3^{e}$ région, dont le rendement, primitivement limité à 12 hectol. 94 lit., a atteint d'abord 17 hectol. 17 lit., puis 19 hectol. 82 lit. La $5^{e}$ région (Centre), qui de 11 hectol. 59 lit. a passé à 14 hectol. 26 lit. et donne aujourd'hui 18 hectol. 4 lit., termine la série des régions moyennes. Les autres régions ont également progressé; leurs rendements actuels sont supérieurs à ceux de la $1^{re}$ période; mais, en les comparant à ceux de la période intermédiaire, on trouve des augmentations assez légères, quelquefois même de faibles diminutions.

ommes de terre.

Le rendement moyen général des pommes de terre en France s'est accru de 6 hectolitres environ pendant les vingt dernières années. Les variations que l'on remarque dans les diverses contrées, tant au point de vue des surfaces ensemencées qu'en ce qui concerne les rendements moyens, ne permettent pas de répartir cette augmentation entre les régions; les chiffres transmis par les préfets ne paraissent pas aussi exacts que pour les céréales. Il est d'ailleurs assez difficile de recueillir des renseignements précis sur cette culture qui est très-divisée et dont une notable partie échappe évidemment aux investigations. Aussi les chiffres des surfaces cultivées pourront-ils paraître défectueux et tout porte à croire qu'ils sont au-dessous de la réalité.

Néanmoins ces chiffres, s'ils ne présentent pas un caractère de précision rigoureuse, permettent d'évaluer approximativement l'importance de la production, et j'ai cru, en conséquence, devoir les maintenir à ce titre dans la présente publication. En résumé, d'après les renseignements généraux qui sont adressés au Ministère, on peut admettre que la culture des pommes de terre n'est pas en voie de progrès, ni au point de vue des surfaces ensemencées ni au point de vue du produit à l'hectare.

## PRODUCTION.

L'examen des surfaces cultivées a permis d'apprécier l'extension donnée à certaines cultures et la diminution subie par d'autres; en passant en revue les rendements moyens, on a pu se rendre compte des améliorations apportées aux procédés de culture. La production totale, n'étant autre chose que le produit des surfaces par les rendements, doit infailliblement présenter des mouvements identiques à ceux qui ont été constatés dans les éléments qui la composent. Pour les espèces dont les ensemencements se sont accrus et dont les rendements ont en même temps augmenté (le froment et l'avoine sont dans ce cas), on trouve en effet une augmentation considérable dans la production totale. Pour d'autres espèces, la surface cultivée a diminué il est vrai; mais le produit à l'hectare s'est élevé et cette augmentation atténue sensiblement la diminution de la production totale. — Tels sont le méteil et le seigle. — L'orge, malgré une diminution de 100,000 hectares dans les surfaces cultivées, présente, grâce à l'élévation du rendement, une augmentation de 3 millions et demi d'hectolitres dans le chiffre de la production moyenne. L'examen de la production totale ne me paraît pas devoir être, par les motifs que je viens d'exposer, aussi détaillé que celui des surfaces et des rendements. Je me contenterai de comparer la production générale en France pendant les trois périodes adoptées. Pour les régions, il suffira de se reporter aux classements qui en ont été faits au point de vue des surfaces et des rendements; un nouveau travail sur la production ferait évidemment double emploi. Mais il est un point sur lequel je crois intéressant d'insister : c'est la comparaison de la valeur brute de la production aux diverses époques que nous avons adoptées pour base des rapprochements déjà faits dans le présent rapport.

La production du froment, de 1815 à 1835, a atteint, en moyenne par année, le chiffre de 57,337,848 hectolitres; pendant les vingt années suivantes la moyenne s'est élevée à 77,464,986 hectolitres. Enfin l'année moyenne actuelle, calculée d'après les récoltes de 1856 à 1876, est de 99,328,747 hectolitres. La culture a suivi une marche ascensionnelle régulière : les surfaces et les rendements ont augmenté progressivement, sans subir aucun temps d'arrêt; la production présente naturellement le même caractère. Il a paru inutile d'établir un tableau pour classer les années par ordre d'importance au point de vue de la production totale : on y retrouverait le même ordre que dans le tableau concernant le produit à l'hectare; ce produit est d'ailleurs la seule véritable expression de la fertilité des années, puisqu'il est indépendant de la surface cultivée. Froment

Le prix moyen annuel de l'hectolitre de froment, de 1815 à 1835, a été de 20 fr. 49 cent., ce qui donne, pour la valeur brute de la production moyenne pendant cette période, 1,175 millions environ. Cette valeur s'est élevée à 1,549 millions pendant les vingt années suivantes. Aujourd'hui la valeur brute de la production annuelle du froment atteint en moyenne 2,191 millions, soit le double de la valeur constatée pendant la 1[re] période. On voit que l'augmentation est surtout considérable pendant les vingt dernières années : ce qui concorde avec l'accroissement, pendant la

même période, des surfaces cultivées qui interviennent ici comme un élément important. En outre, le prix moyen annuel de l'hectolitre a été plus élevé depuis 1855, moins à cause des quelques mauvaises années que l'on rencontre dans cette période, que par suite de l'accroissement du bien-être général et de la diminution de valeur de l'argent.

Le tableau ci-après permet de se rendre compte de l'augmentation de la valeur brute de la production dans les différentes régions :

VALEUR BRUTE DE LA PRODUCTION MOYENNE ANNUELLE DU FROMENT.

(MILLIONS DE FRANCS.)

| RÉGIONS. | DE 1815 À 1835. | DE 1836 À 1855. | DE 1856 À 1876. |
|---|---|---|---|
| 1re — (Nord-Ouest) | 122 | 180 | 227 |
| 2e — (Nord) | 301 | 379 | 513 |
| 3e — (Nord-Est) | 139 | 199 | 239 |
| 4e — (Ouest) | 101 | 167 | 282 |
| 5e — (Centre) | 73 | 114 | 191 |
| 6e — (Est) | 98 | 143 | 233 |
| 7e — (Sud-Ouest) | 113 | 153 | 208 |
| 8e — (Sud) | 100 | 101 | 126 |
| 9e — (Sud-Est) | 80 | 100 | 132 |
| France entière | 1,175 | 1,549 | 2,191 |

Si l'on examine maintenant la valeur du produit d'un hectare, on trouve, pour la France entière, que l'hectare cultivé en froment produisait, pendant la 1re période, une valeur brute de 243 francs, qui s'est élevée pendant les vingt années suivantes à 266 francs et qui atteint actuellement 321 francs. Le tableau suivant contient l'indication de la même valeur pour les diverses régions pendant chacune des trois périodes :

VALEUR BRUTE DE LA PRODUCTION MOYENNE ANNUELLE D'UN HECTARE CULTIVÉ EN FROMENT.

(PAILLE NON COMPRISE.)

| RÉGIONS. | DE 1815 À 1835. | DE 1836 À 1855. | DE 1856 À 1876. |
|---|---|---|---|
| | francs. | francs. | francs. |
| 1re — (Nord-Ouest) | 245 | 292 | 313 |
| 2e — (Nord) | 337 | 386 | 446 |
| 3e — (Nord-Est) | 220 | 267 | 324 |
| 4e — (Ouest) | 173 | 224 | 279 |
| 5e — (Centre) | 187 | 237 | 303 |
| 6e — (Est) | 250 | 282 | 298 |
| 7e — (Sud-Ouest) | 159 | 200 | 273 |
| 8e — (Sud) | 212 | 213 | 260 |
| 9e — (Sud-Est) | 231 | 251 | 266 |
| France entière | 243 | 266 | 321 |

Ici nous retrouvons, comme on devait s'y attendre, le même classement que pour les rendements, la surface cultivée n'entrant pas dans les éléments de calcul. La valeur à l'hectare est très-variable selon les régions; il ne faut d'ailleurs la considérer que comme une évaluation moyenne,

car elle dépend, chaque année, du rendement et du prix. Aussi trouve-t-on des différences notables, non-seulement entre les régions, mais aussi entre les départements d'une même région.

Permettez-moi, Monsieur le Président, d'ajouter à cet exposé de la production du froment quelques considérations relatives à une question souvent agitée, et sur laquelle les opinions sont très-partagées : je veux parler de la consommation.

La consommation peut être déterminée par deux procédés différents. Le premier consiste à l'établir *à priori* par une évaluation directe des divers besoins (nourriture des individus et des animaux, semences, usages divers). D'après la seconde méthode, on compare les importations aux exportations; si les importations l'emportent, on ajoute leur montant, déduction faite des exportations, au chiffre de la production. Si, au contraire, il y a excédant d'exportation, on le retranche de la production. Dans l'un et l'autre cas, le résultat obtenu représente évidemment la quantité consommée.

Le premier procédé me paraît présenter de sérieux inconvénients. Les informations recueillies directement sur les besoins divers ne sauraient être exactes : les quantités de semence seraient seules susceptibles d'être estimées avec une certaine précision, et encore sont-elles très-variables, puisqu'elles dépendent de la nature du sol, des quantités d'engrais appliquées, de l'emploi des instruments perfectionnés, etc.

La seconde méthode offre, selon moi, plus de garanties d'exactitude; mais il est indispensable d'opérer sur une période assez longue. En effet, si les calculs portaient sur une année isolée ou sur un petit nombre d'années, on se trouverait en présence de deux causes d'erreur : d'abord les documents publiés par l'Administration des douanes ne contiennent qu'un seul chiffre pour les quantités importées et exportées du 1er janvier au 31 décembre, tandis que l'année agricole commence au 1er août. On serait ainsi exposé à constater des importations correspondant à des années d'abondance ou des exportations correspondant à des années peu productives. En outre, les stocks provenant des récoltes surabondantes exerceraient une influence prépondérante sur les calculs, qui se trouveraient ainsi faussés. Si l'on opère, au contraire, sur un nombre d'années assez considérable, ces deux inconvénients disparaissent en grande partie. Les excédants de production et les déficit se compensent, et le défaut de concordance de l'année agricole avec l'année usuelle n'a plus d'effet sensible sur l'établissement des moyennes. L'application de ce procédé aux deux dernières des périodes choisies pour bases des comparaisons déjà faites dans cet exposé donne les résultats suivants :

1° De 1836 à 1855 :

| | |
|---|---|
| Quantités de froment importées (grains et farines) | 41,769,126 hect. |
| Quantités de froment exportées (grains et farines) | 24,315,223 |
| Excédant d'importation | 17,453,903 |
| Soit en moyenne par année | 872,695 |
| Production moyenne annuelle | 77,464,936 |
| En ajoutant ces deux chiffres, on obtient pour la consommation moyenne annuelle | 78,337,631 |

2° De 1856 à 1876 :

| | | |
|---|---|---|
| Quantités de froment importées (grains et farines) | 117,785,876 | hect. |
| Quantités de froment exportées (grains et farines) | 58,962,900 | |
| Excédant d'importation | 58,822,976 | |
| Soit en moyenne pour une année | 2,801,092 | |
| Production moyenne annuelle | 99,328,767 | |
| Consommation moyenne annuelle | 102,129,859 | |

La consommation aurait donc augmenté dans de fortes proportions, et cet accroissement est évidemment la cause de l'extension donnée à la culture du froment, puisque les importations continuent à l'emporter sur les exportations. L'excédant d'importation, qui nous donne la mesure de l'insuffisance de la production, est insignifiant; car il représente en moyenne un peu moins des trois centièmes des besoins annuels, et une augmentation de 200,000 hectares dans les surfaces cultivées rétablirait largement l'équilibre. On peut donc affirmer que la France produit sensiblement la quantité de froment nécessaire à sa consommation.

Méteil. Cette culture tend à disparaître : les ensemencements ont diminué; mais, d'un autre côté, le rendement moyen général a augmenté, ce qui réduit à un cinquième environ la diminution de la production totale.

La culture du méteil, étant très-disséminée, ne présente d'importance réelle sur aucun marché; aussi les prix n'en figurent-ils pas sur toutes les mercuriales; il n'a donc pas été possible d'établir pour cette espèce les calculs qui ont été faits en ce qui concerne le froment, ce qui d'ailleurs n'offrirait qu'un faible intérêt. La production actuelle est d'environ 8 millions et demi d'hectolitres; le prix moyen de l'hectolitre est de 18 fr. 90 cent., ce qui donne une valeur approximative de 160 millions de francs.

Seigle. Le seigle a perdu 711,000 hectares, soit 26 p. 0/0 environ de la surface cultivée annuellement dans la 1re période; l'augmentation de 21 p. 0/0 constatée dans le rendement moyen général réduit à 6 p. 0/0 environ la diminution dans la production totale.

Cette production est aujourd'hui de 26 millions et demi d'hectolitres en moyenne; de 1815 à 1835 elle était de 28,254,000 hectolitres; pendant la période intermédiaire elle atteignait presque 30 millions d'hectolitres. Il y a donc eu augmentation dans la production moyenne pendant cette période; en effet, la diminution des surfaces cultivées a été moins forte que l'augmentation du rendement à l'hectare.

Si la production totale a légèrement diminué, les prix ont subi une assez notable augmentation; aussi la valeur brute de la production en grains, qui en 1852 était estimée à 279 millions et en 1862 à 342 millions, peut être évaluée actuellement à 405 millions.

Orge. La production de l'orge atteint aujourd'hui le chiffre de 20 millions d'hectolitres, soit 1 million

de plus que pendant la 2^e^ période, et 2 millions et demi de plus que pendant la 1^re^. Ce fait provient de l'augmentation considérable du rendement moyen, qui s'est élevé de 13 hectol. 13 lit. à 18 hectol. 06 lit., tandis que les surfaces cultivées n'ont diminué que d'un dixième environ. Encore convient-il de rappeler que cette diminution porte, pour ainsi dire exclusivement, sur le territoire perdu en 1871 par la 3^e^ région. La production moyenne ne se trouve donc atteinte que depuis cette époque.

La valeur brute de la production de l'orge peut être évaluée actuellement à 263 millions de francs.

La statistique de 1852 assigne à la production en grains de l'orge une valeur de 147 millions, que la statistique de 1862 porte à 216 millions.

Sarrasin.

La production totale du sarrasin, pendant les vingt dernières années, a atteint en moyenne 10,388,000 hectolitres, soit 100,000 hectolitres de plus que pendant la 2^e^ période et 3,878,000 hectolitres de plus que pendant la première.

Ces augmentations sont dues surtout à la progression des rendements moyens, car les surfaces cultivées sont restées presque stationnaires.

Cette culture produit actuellement, en moyenne, une valeur brute totale de 129 millions environ, soit 178 francs à l'hectare.

En 1852, on estimait la production totale en grains à 76 millions; la statistique de 1862 porte cette valeur à 112 millions.

Maïs et millet.

Jusqu'ici les renseignements concernant ces deux espèces ont été confondus, malgré les différences notables que présentent les conditions de leur culture. Il en résulte dans les chiffres recueillis une incertitude qui disparaîtra à l'avenir; car désormais le maïs, dont la culture est importante dans quelques régions, fera l'objet d'informations séparées. Quoi qu'il en soit, les états que nous possédons peuvent être utilisés pour les régions où le maïs domine. Dans l'une d'elles, la 7^e^ (Sud-Ouest), nous trouvons une culture stationnaire à tous les points de vue. Dans la 8^e^ (Sud) le rendement moyen s'est accru et la production totale a augmenté de 1,800,000 hectolitres. Le prix du maïs a subi l'influence générale : il atteint aujourd'hui 14 fr. 81 cent. l'hectolitre.

Avoine.

De 1815 à 1835 la production de l'avoine, année moyenne, ne s'élevait qu'à 42 millions d'hectolitres; ce chiffre est monté à 59 millions dans la 2^e^ période; il s'élève aujourd'hui à 72 millions d'hectolitres. L'examen des rendements moyens a montré qu'en ce qui concerne l'avoine, ils étaient très-différents dans les diverses régions; la répartition de la production totale subit naturellement les mêmes influences, et le classement des régions au point de vue du produit à l'hectare sera intéressant à consulter. Il importe toutefois de remarquer que les 2^e^ et 3^e^ régions représentent à elles seules la moitié de la production de la France. L'augmentation définitive est sensiblement égale à celle qui a été constatée dans la production du froment, bien que l'accroissement des surfaces cultivées en avoine soit moins considérable que celui des ensemencements de froment. Cela tient à l'élévation des rendements qui a été plus accentuée pour l'avoine.

L'extension donnée à la culture de l'avoine est due évidemment à l'accroissement de la consommation; car l'exportation annuelle est à peu près nulle (570,000 hectolitres en moyenne, pendant

les dix dernières années), tandis que l'importation s'est accrue sensiblement depuis quinze ans et atteint actuellement une moyenne annuelle qui dépasse 3 millions d'hectolitres.

Les prix de l'avoine ont aussi augmenté dans une proportion plus grande que ceux du froment. Le prix moyen annuel de la 1re période était de 7 fr. 64 cent.; le prix moyen des vingt dernières années dépasse ce chiffre de 10 francs.

Aussi la production de 1815 à 1835, qui représentait, en moyenne, une valeur brute de 322 millions, peut être évaluée aujourd'hui à 749 millions; la valeur a donc doublé.

Ensemble des céréales.

D'après les renseignements qui précèdent, on peut estimer à 4 milliards de francs environ (4,042,000,000 fr.) la valeur brute de la production d'une année moyenne en céréales de toutes espèces. Les statistiques de 1840, 1852 et 1862 donnent, pour la production en grains de l'ensemble des céréales, les valeurs suivantes :

| | |
|---|---|
| 1840 | 2,116,000,000 fr. |
| 1852 | 2,614,000,000 |
| 1862 | 3,865,000,000 |

La valeur actuelle dépasserait donc de 177 millions de francs celle de 1862 et de 1,428,000,000 de francs celle de 1852. C'est, en effet, de 1852 que part l'augmentation des prix.

A la valeur des grains, les statistiques que je viens de citer ajoutaient la valeur de la production de la paille, en estimant, pour chaque espèce, le quintal de paille à un prix quatre fois moindre que celui du quintal de grain. Il en résultait, pour la valeur totale de la production, une augmentation de 596 millions en 1852 et de 998 millions en 1862.

Les produits de la paille ne figurant pas dans les états recueillis par la Direction de l'agriculture, il n'a pas été possible d'établir exactement un calcul semblable. Mais on peut se rendre approximativement compte de l'augmentation qui en résulterait pour la valeur de la production actuelle, qui approcherait ainsi de 5 milliards. Dans les années d'abondance, comme 1872 et 1874, ce chiffre serait notablement dépassé, malgré l'abaissement relatif des prix qui est la conséquence ordinaire des récoltes exceptionnelles.

Pommes de terre.

La production d'une année moyenne en pommes de terre atteint aujourd'hui 110 millions d'hectolitres, et représente, à raison de 6 fr. 08 cent., une valeur brute de 670 millions de francs. Pendant la 2e période, cette valeur ne paraît pas avoir atteint, en moyenne, 400 millions. Les prix, assez variables, ont néanmoins augmenté.

J'ai terminé, Monsieur le Président, l'examen des résultats généraux consignés dans les états qui font l'objet de la présente publication. Il en ressort, en définitive, que la culture des céréales a pris, en France, une extension très-importante, qui, loin de nuire aux autres cultures, a marché de pair avec leur développement. Les rendements moyens se sont accrus dans des proportions très-satisfaisantes, et il en est résulté, tout en tenant compte de la diminution de la valeur de l'argent et de l'augmentation du prix de la main-d'œuvre, un accroissement notable de la richesse

publique. Ces faits sont déjà connus de tous, mais ils se trouvent confirmés par des documents recueillis régulièrement depuis de longues années et publiés aujourd'hui tels qu'ils ont été transmis à l'Administration. Par cette concordance avec des résultats généralement admis, les renseignements contenus dans le présent volume acquièrent un caractère de vérité qui leur permet de servir de bases sérieuses aux études statistiques et économiques que comporte un sujet aussi vaste et aussi intéressant.

Veuillez agréer,

Monsieur le Président,

l'hommage de mon profond respect.

*Le Ministre de l'Agriculture et du Commerce,*

TEISSERENC DE BORT.

Versailles, le 5 avril 1878.
